

IN THE CLAIMS:

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-47 (Cancelled)

Claim ~~48~~<sup>1</sup> (Previously presented): A method of producing an immune response in an animal comprising, administering to said animal, an effective amount of an antigenic composition, comprising an adjuvant and an isolated *Chlamydia* species high molecular weight (HMW) protein, said HMW protein encoded by a nucleic acid comprising nucleotide residues 466 to 3417 of SEQ ID NO.:1, wherein the *Chlamydia* species is *Chlamydia trachomatis*, *Chlamydia pecorum*, or *Chlamydia pneumoniae*.

Claim ~~49~~<sup>2</sup> (Previously presented): The method of claim ~~48~~<sup>1</sup>, wherein said HMW protein comprises an amino acid sequence of amino acid residues 29 to 1012 of SEQ ID NO.:2.

Claim ~~50~~<sup>3</sup> (Previously presented): The method of claim ~~48~~<sup>1</sup>, wherein said HMW protein is obtained using plasmid pAH342 obtainable from *E.coli* BL21 (pAH342) assigned ATCC accession number 98538.

Claim ~~51~~<sup>4</sup> (Previously presented): A method of producing an immune response in an animal, comprising administering to said animal, an effective amount of an antigenic composition, comprising a pharmaceutical carrier and an isolated recombinantly produced *Chlamydia* species HMW protein, said HMW protein encoded by a nucleic acid comprising a nucleotide sequence of SEQ ID NO.:1, wherein the *Chlamydia* species is *Chlamydia trachomatis*, *Chlamydia pecorum*, or *Chlamydia pneumoniae*.

Claim ~~52~~<sup>5</sup> (Previously presented): A method of producing an immune response in an animal, comprising administering to said animal, an effective amount of an antigenic composition, comprising a pharmaceutical carrier and an isolated recombinantly produced *Chlamydia* species HMW protein, wherein said HMW protein comprises an amino acid sequence of SEQ ID NO.:2.

Claim <sup>6</sup>~~3~~ (Previously presented): A method of producing an immune response in an animal, comprising administering to said animal, an effective amount of an antigenic composition, comprising a pharmaceutical carrier and an isolated recombinantly produced *Chlamydia* species HMW protein, wherein said HMW protein is obtained using plasmid pJJ701 obtainable from *E.coli* AR58 (pJJ701) assigned ATCC accession number PTA-4123.

Claim <sup>7</sup>~~4~~ (Currently amended): A method of producing an immune response in an animal, comprising administering to said animal, an effective amount of an antigenic composition, comprising a pharmaceutical carrier and an isolated recombinantly produced *Chlamydia trachomatis*, *C. pecorum* or *C. pneumoniae* HMW protein, wherein said HMW protein is encoded by a nucleic acid having a nucleotide sequence which hybridizes under conditions comprising 50% formamide and 37°C to a nucleotide sequence complementary to the nucleotide sequence of SEQ ID NO.:1 from residue 382 466 to residue 3417, and which HMW protein is recognized by an antibody that specifically binds to a peptide comprising an amino acid sequence of SEQ ID NO.:2.

Claim <sup>8</sup>~~5~~ (Previously presented): The method of <sup>any one of claims</sup> ~~claim~~ 48-54, wherein said composition is formulated as a microparticle, a capsule, a liposome preparation or an emulsion.

Claim <sup>9</sup>~~6~~ (Previously presented): The method of <sup>any one of claims</sup> ~~claim~~ 51-54, wherein said animal is a mammal or a bird.

Claim <sup>10</sup>~~7~~ (Previously presented): The method of <sup>any one of claims</sup> ~~claim~~ 51-54, wherein said composition further comprises an adjuvant.
